

## PS2004: Biological Psychology

View Online

All modules have 2 modes of learning: Mode 1: Learn how to source relevant learning material and develop independent reading skills. Mode 2: Focused reading about the basic concepts and classic studies/theories relevant to the module in relevant chapters of suggested core texts. Further reading is also necessary. Different modules emphasise a different balance of these modes. While many of the topics covered in this module can be learnt about in textbooks, this is not always the case. Furthermore, the lectures are not based on any one textbook, and textbook chapters are likely to contain some information that is less relevant. The ability to skim textbooks to extract relevant information, as well as the ability to find reading for yourselves, is part of what you are learning. Please note that it is very important to come prepared to lectures, having already done some reading for the week. Bearing all of this in mind, you will find that most biological psychology and cognitive neuroscience textbooks will provide useful background information.

NB: PURVES BOOK REFERS TO 11TH EDITION. CHAPTERS IN OLDER EDITIONS MAY BE DIFFERENT.
